

Patella Luxation Examination

Name	Ch Adrahil Burn Em All (Cinders)
Breed	Chihuahua SC
Microchip	991003002341926
DOB	15/02/2023
Sex	F
Examining Veterinary Clinic	Clinton St Vet 5-7 Clinton St Goulburn NSW 2580 0248211881
Veterinarian	Dr. Madeline Cantwell
Date of Evaluation	24/10/24

Patella Examination Results

1. Grading – Circle Applicable

	Left	Right
Normal	Yes <input type="radio"/> No <input checked="" type="radio"/>	<input checked="" type="radio"/> Yes <input type="radio"/> No
Luxation Grade	1 <input type="radio"/> 2 <input checked="" type="radio"/> 3 <input type="radio"/> 4	1 <input type="radio"/> 2 <input type="radio"/> 3 <input type="radio"/> 4
Medial	Yes <input type="radio"/> No <input checked="" type="radio"/>	Yes <input type="radio"/> No <input checked="" type="radio"/>
Lateral	Yes <input checked="" type="radio"/> No <input type="radio"/>	Yes <input type="radio"/> No <input checked="" type="radio"/>
Onset 6-12 Months	Yes <input type="radio"/>	Yes <input type="radio"/>
Onset >12 Months	Yes <input type="radio"/>	Yes <input type="radio"/>

Notes:

Luxating patella in left hindlimb likely a result from previous injury treated at the clinic. Trochlea groove and remaining stifle anatomy otherwise healthy.

3. Classification of luxation

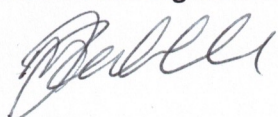

Grade 1- The patella easily luxates manually at full extension of the stifle joint but returns to the trochlea when released.

Grade 2- There is frequent patellar luxation which, in some cases, becomes permanent.

Grade 3 - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.

Grade 4 - The tibia is medially twisted, and the tibial crest may show further deviation medially with the result that it lies 50 degrees to 90 degrees from the cranial/caudal plane.
