

Patellar Luxation Examination

Name	Manny - Adrahil The Alderman
Breed	Chihuahua
Microchip	99100300147301
DOB	3/9/2021
Sex	M
Examining Veterinary Clinic	SWAN VALLEY VET 15 Woollcott Ave West Swan 6055 info@swanvalleyvet.com.au
Veterinarian	<i>Tracy Pawszak</i> DR TRACY PAWSZAK
Date of Evaluation	20/4/22

Patellar Examination Results

1. Grading - Circle Applicable

	Left		Right	
Normal	<input checked="" type="radio"/> Yes	<input type="radio"/> No	<input checked="" type="radio"/> Yes	<input type="radio"/> No
Bilateral Grade	1 2 3 4		1 2 3 4	
Unilateral Grade	1 2 3 4		1 2 3 4	
Medial	<input type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Yes	<input type="radio"/> No
Lateral	<input type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Yes	<input type="radio"/> No
Intermittent	<input type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Yes	<input type="radio"/> No
Permanent	<input type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Yes	<input type="radio"/> No
Onset 6-12 Months	<input type="radio"/> Yes		<input type="radio"/> Yes	
Onset >12 Months	<input type="radio"/> Yes		<input type="radio"/> Yes	

3. Classification of luxation

Grade 1- The patella easily luxates manually at full extension of the stifle joint, but returns to the trochlea when released.

Grade 2- There is frequent patellar luxation which, in some cases, becomes more or less permanent.

Grade 3 - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.

Grade 4 - The tibia is medially twisted and the tibial crest may show further deviation medially with the result that it lies 50 degrees to 90 degrees from the cranial/caudal plane.
