3. Classification of luxation

Grade 1- The patella easily luxates manually at full extension of the stifle joint but returns to the trochlea when released.

Grade 2- There is frequent patellar luxation which, in some cases, becomes permanent.

Grade 3 - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.

Grade 4 - The tibia is medially twisted, and the tibial crest may show further deviation medially with the result that it lies 50 degrees to 90 degrees from the cranial/caudal plane.
