

Curly Coated Retriever

Last updated: 23 Jan 2015

Kennel Club, London

Revised July 1996

FCI Standard No 110

Amended November 1996

Adopted in Australia 1 January 1998

Amended May 2000

Group: Group 3 (Gundogs)

History:

General Appearance: Strong, upstanding dog with a degree of elegance. Distinctive coat.

Characteristics: Intelligent, steady, reliable.

Temperament: Bold, friendly, self-confident and independent. May seem aloof.

Head And Skull: Head wedge-shaped in both side and front profiles. In proportion to body size. Slight stop. Foreface and skull equal length. Planes of skull and muzzle parallel. Nose black in blacks and brown in livers.

Eyes: Large, not prominent, oval shaped, obliquely set. Dark brown in blacks, in livers brown tone to blend with coat colour.

Ears: Rather small, set slightly above level of eye; lying close to head, covered with small curls.

Mouth: Jaws strong with perfect, regular and complete scissor bite, i.e. Upper teeth closely overlapping lower teeth and set square to the jaws.

Neck: Strong and slightly arched, of medium length, free from throatiness and flowing freely into well laid back shoulders.

Forequarters: Shoulders well laid back and muscular. Upper arm and shoulder blade approximately equal length. Forelegs straight with strong pasterns and set well under body.

Body: Chest deep with well-sprung ribs, oval in cross section with brisket reaching elbow. Forechest visible. Ribs extend well back into short, deep and powerful loin. Slight tuck-up to flank. Topline strong and level. The dog should be slightly longer in body measured from point of shoulder to point of buttock than in height from withers to ground.

Hindquarters: Strong, muscular. Moderate turn of stifle. Hocks well let down and well bent.

Feet: Round, tight, with well-arched toes.

Tail: Flows from topline. Should reach approximately to hock; carried straight on a level with topline when moving.

Gait/Movement: Effortless, powerful gait with good extension and drive. Parallel movement. At speed legs tend to converge.

Coat:

Body coat a thick mass of small, tight, crisp, curls lying close to skin, extending from occiput to tip of tail; without undercoat or bare patches. Elsewhere hair smooth.

Colour: Black or liver.

Sizes: Ideal height at withers: Dogs 69 cms (27 ins)
Bitches at withers: 64 cms (25 ins)

Faults: Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree and its effect upon the health and welfare of the dog, and on the dog's ability to perform its traditional work.

Notes: Male animals should have two apparently normal testicles fully descended into the scrotum.
